Underpass Flood Detector

RAS is a modular alarm system designed to warn road users in case of flooding of underpasses.

The **capacitive technology sensor** *is highly reliable and is able to detect flooding and generate an alarm that is transmitted to the control unit.*

The control unit is equipped with fixed or flashing outputs to which can be connected LED warning lights, traffic lights or LED message panel.

RAS can be integrated with a **4G router** *to send an alarm to the competent authorities.*

The system can be powered at **230V** *or with a* **photovoltaic kit.**
